ROI 2: St Lucia (Green team)

Description

The marine environment surrounding St Lucia is central to the island's economy and culture. It supports fisheries, tourism, and coastal livelihoods, while providing ecosystem services such as carbon storage and storm protection. Coastal livelihoods can be affected by issues of poor water quality and debris. Coral reefs, mangroves, and seagrass beds underpin the Blue Economy and biodiversity, making sustainable management vital for food security, economic sustainability and climate resilience. Optically, the areas around St Lucia and other such island states are characterised by classically clear tropical waters, with influence from the shallow sea floor substrates and ecosystems, as well as influences from open sea sources.

Region

Date start	2025-05-07T00:00:00.000Z
Date end	2025-05-08T00:00:00.000Z
West	-61.5
East	-60.0
South	13.00
North	14.50
