ROI 5: Benguela (Yellow team)

Description

The Benguela Current Large Marine Ecosystem (BCLME), stretching along the coasts of Angola, Namibia, and South Africa, is one of the world's most productive upwelling systems. Its nutrient-rich waters sustain major fisheries and a growing aquaculture industry, both of which support food security and livelihoods across the region. Beyond fisheries, the Benguela underpins economic activities such as shipping, tourism, and extraction of oil, gas, and diamonds, contributing billions annually to national economies. Optically, the Benguela is driven by the upwelling system that influences phytoplankton productivity and extreme blooms in the region.

Region

Date start	2025-06-21T00:00:00.000Z
Date end	2025-06-22T00:00:00.000Z
West	17.50
East	18.50
South	-33.00
North	-31.50
